

MicroTouch™ M150 Monitor Card Reader Bracket Kit

The card reader bracket kit is designed to overcome the weaker attachment systems magnetic stripe card readers typically rely on. Left side or right side mounting of the bracket kit to the M150 monitor allows users to position the reader in an optimal location for their operating environment. Ideal for open architecture, component-based POS systems, this kit allows customers to choose a card reader they are most comfortable with, as well as allowing for quick technology upgrades as they become available. In the case of a reader failure, a new reader can be quickly installed, minimizing downtime.

1. Bracket Kit

The card reader bracket kit has all the necessary hardware needed to affix the bracket to the monitor, as well as the card reader to the bracket, and to route the cable into the M150 monitor cable management system. The bracket can be mounted on either the left or right side of the monitor in order to meet the needs of a variety of operating environments and space constraints.

** The card reader is not included as part of this kit. MagTek™ and IDTech™ "mini" size readers are compatible with the bracket.*

2. Rear View

The bracket bolts to the back of the monitor in minutes to provide a secure mounting platform for the card reader. The bracket also provides a channel to route the cable down into the cable management slots of the M150 base.

3. Front View

The end result is a secure, attractive installation of a card reader of your choice on the M150 Monitor. Great looks, great functionality.
